

Water Levels and Artesian Pressure in Observation Wells in the United States in 1949

Part 5. Northwestern States

Prepared under the direction of C. G. PAULSEN, Chief Hydraulic Engineer

GEOLOGICAL SURVEY WATER-SUPPLY PAPER 1160

*Prepared in cooperation with the States
of Colorado, Idaho, Montana, Oregon,
Utah, Washington, Wyoming, and
other agencies*

UNITED STATES DEPARTMENT OF THE INTERIOR

Oscar L. Chapman, *Secretary*

GEOLOGICAL SURVEY

W. E. Wrather, *Director*

PREFACE

This report was prepared by the Geological Survey in cooperation with the States of Colorado, Idaho, Montana, Oregon, Utah, Washington, and Wyoming, and other agencies, by personnel of the Water Resources Division under the direction of:

C. G. Paulsen.....	Chief Hydraulic Engineer
A. N. Sayre.....	Chief, Ground Water Branch
S. W. Lohman.....	District Geologist (Ground Water), Denver, Colo.
R. L. Nace.....	District Geologist (Ground Water), Boise, Idaho
Frank A. Swenson.....	District Geologist (Ground Water), Billings, Mont.
R. C. Newcomb.....	District Geologist (Ground Water), Portland, Oreg.
H. E. Thomas.....	District Geologist (Ground Water), Salt Lake City, Utah
M. J. Mundorff.....	District Geologist (Ground Water), Tacoma, Wash.

**WATER LEVELS AND ARTESIAN PRESSURE IN OBSERVATION WELLS
IN THE UNITED STATES IN 1949**

Part 5. NORTHWESTERN STATES

INTRODUCTION

By A. N. Sayre and others

The publication of records of water levels and artesian pressures annually in the United States was begun by the Geological Survey in 1935. Prior to 1940 the records were published in a single volume--1935, 777; 1936, 817; 1937, 840; 1938, 845; and 1939, 886. Beginning with 1940 the records have been published in six volumes, covering the northeastern, southeastern, north-central, south-central, northwestern, and southwestern sections of the country. Hawaii is included in the southwestern section. The following table gives the numbers of water-level reports from 1940 through 1949.

Year	North-eastern (1)	South-eastern (2)	North-central (3)	South-central (4)	North-western (5)	South-western (6)
1940	906	907	908	909	910	911
1941	936	937	938	939	940	941
1942	944	945	946	947	948	949
1943	986	987	988	989	990	991
1944	1016	1017	1018	1019	1020	1021
1945	1023	1024	1025	1026	1027	1028
1946	1071	1072	1073	1074	1075	1076
1947	1096	1097	1098	1099	1100	1101
1948	1126	1127	1128	1129	1130	1131
1949	1156	1157	1158	1159	1160	1161

Ground-water investigations are concerned with the availability of usable water supplies, land drainage, flood control, construction of waterways and dams, mine drainage, and other problems to which the principles of ground-water hydrology are pertinent. Water levels in wells indicate the stages of the aquifers; they show the extent to which water supplies

are depleted by drought or by heavy pumping, and the extent to which they are replenished in seasons of abundant rainfall or melting snow. The recorded changes of pressure in artesian wells also indicate depletion or replenishment of the artesian supplies.

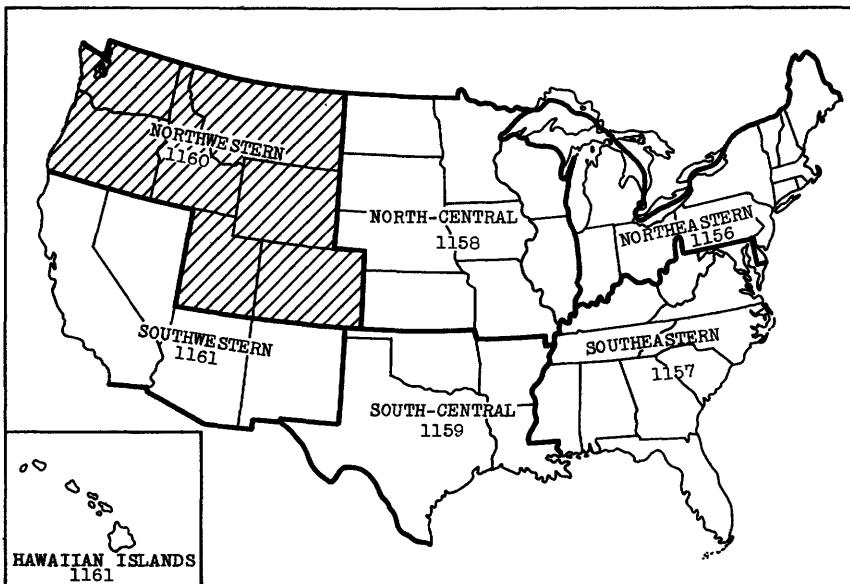

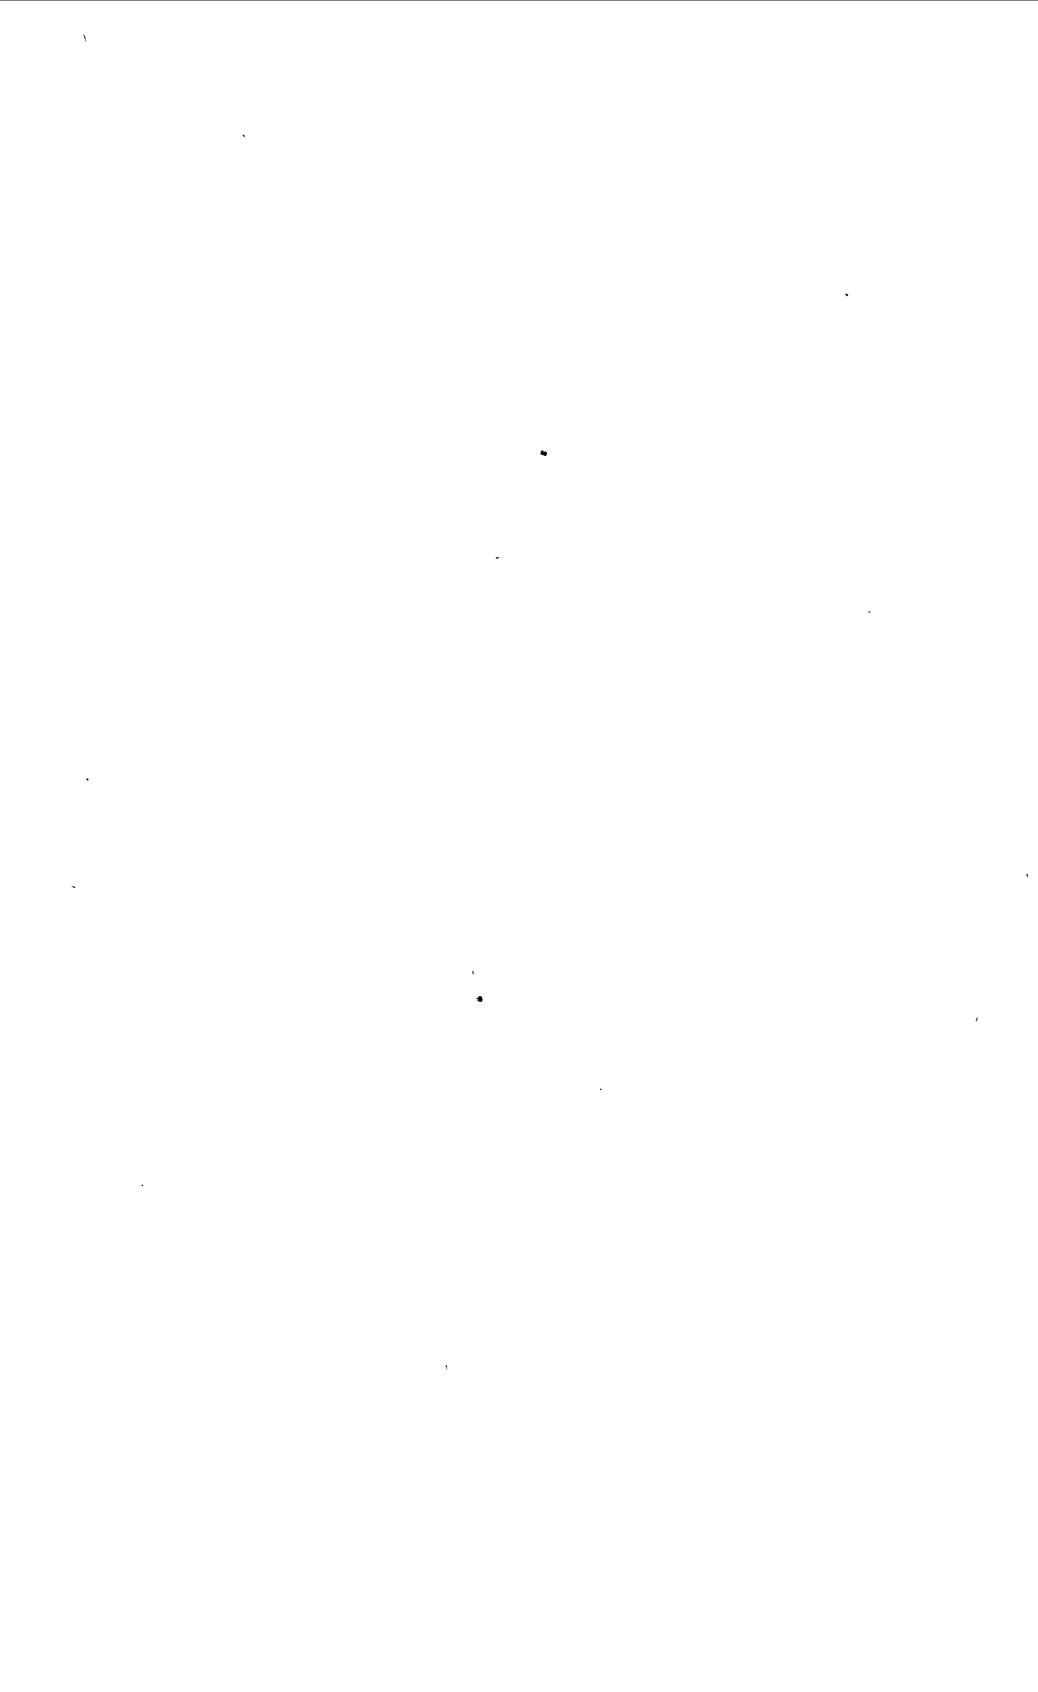

Figure 1.--Outline map of the United States showing States included in each of the six water-supply papers on water levels and artesian pressures in observation wells in 1949. The shaded area indicates the States included in this volume.

This volume gives records of water levels and artesian pressures in observation wells in the northwestern States (Colorado, Idaho, Montana, Oregon, Utah, Washington, and Wyoming). Of the 1,713 wells listed, 37 are equipped with recording gages. Descriptive matter for some wells is given in previous reports. For wells not previously reported complete records of water levels are given. For wells whose previous records have been published this volume gives only the current records.

Before 1943, the water levels and artesian pressures for some wells were given in feet above or below the measuring points and for other wells in feet above or below sea level or above or below various assumed datum

planes. In 1943, a precise datum plane was selected at each well which was approximately the land surface. The water levels and artesian heads for all wells listed in this volume are referred to land-surface datum. Water levels above this datum are preceded by a plus (+) sign, those below this datum have no sign but are understood to be minus (-).

Measurements of water levels and artesian pressures in wells were made under the direction of the district supervisors of the Ground Water Branch in the several States. Verda M. Dougherty edited the reports; Rodney Hart edited the illustrations; and Penn Livingston had general charge of the nation-wide observation-well program.

COLORADO

By V. M. Burtis and W. E. Code

PROGRAM OF WORK

The observation-well program in Colorado, begun in 1942, was continued in 1949 in cooperation with the State Water Conservation Board and with the Agricultural Experiment Station, Colorado A. & M. College. Ground-water investigations were begun during 1949 in Huerfano County and in the irrigated part of the artesian basin south of Monte Vista in the San Luis Valley. Studies were continued in the irrigated area north of Monte Vista in the San Luis Valley, in the Grand Junction artesian Basin in Mesa County, and in the Denver artesian basin. Studies in the South Platte Valley were continued as a part of the Missouri Basin program. About 900 measurements were made in 208 wells. Three wells are equipped with recording gages.

WELL-NUMBERING SYSTEM

Colorado is subdivided under three principal meridian and base line systems: (1) the sixth principal meridian; (2) the New Mexico principal meridian; and (3) the Ute principal meridian. All of the wells described lie in the northwest (B) or southwest (C) quadrants of the area subdivided by the sixth principal meridian, whose four quadrants have been assigned the letters A to D lettered in counter-clockwise direction from the northeast (A) quadrant through the southeast (D) quadrant. The letter forming the first segment of the number indicates the quadrant, the second the township, the third the range, and the fourth the section. The letters that make up the last segment indicate the position of the well in the section, the first letter indicating the quarter section, the second, the 40-acre tract within the quarter section, and the third, the 10-acre tract within the 40-acre tract. The quarters, 40-acre tracts, and 10-acre tracts are lettered from a to d in counter-clockwise direction. A digit at the end of a number indicates a particular well of two or more in the same 10-acre tract.

IDAHO

By R. L. Nace and S. W. Fader

PROGRAM OF WORK

The observation-well program in Idaho, begun in 1946, was continued in 1949 in cooperation with the State Department of Reclamation. Measurements in observation wells in Ada and Canyon Counties were made in cooperation with the Nampa-Meridian Irrigation District; in Kootenai County, in cooperation with the Washington Water Power Company and Farragut College; and in Minidoka County in cooperation with the Federal Bureau of Reclamation. Investigations on special projects for the Federal Bureau of Reclamation were continued in the Rathdrum Prairie area of Kootenai County and in the Central Snake River Plain in Gooding, Jerome, and Minidoka Counties. A study of ground-water resources in the Central Snake River Plain in Butte, Bonneville, and Bingham Counties was begun in cooperation with the Atomic Energy Commission. At the end of the year measurements were being made in 79 wells, 2 of which were equipped with recording gages.

FLUCTUATIONS OF WATER LEVELS

In the heavily irrigated Boise Valley, in Ada and Canyon Counties, the effects of local precipitation are largely masked by the effects of recharge by seepage losses from irrigation. Water levels in wells in the valley for which long-term records are available reached new highs during 1949, chiefly in September near the end of the irrigation season. Most of the wells made net gains during the year despite below-normal precipitation.

Well 7N 2E-34cal, in Boise County, reached a year-end level (39.9) nearly the same as at the end of 1948. This well, in a mountain valley area, represents the natural ground-water storage available to maintain the dry-season flow of local streams. (See fig. 2.)

There was a net rise of 2.2 feet in year-end level in well 3N 41E-6cbl in Bonneville County, near the edge of an extensive irrigated area.

Water levels in wells in Kootenai County at the end of the year ranged from about 3 feet below to slightly above the 1948 year-end levels; all

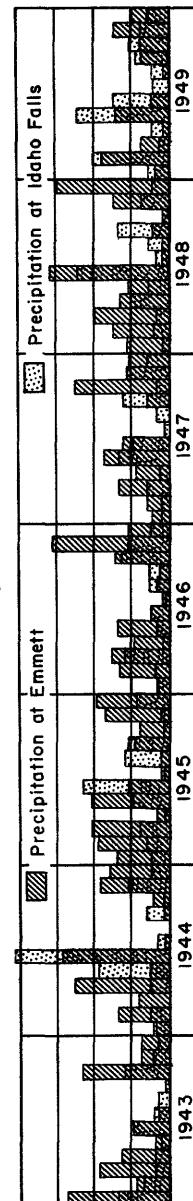

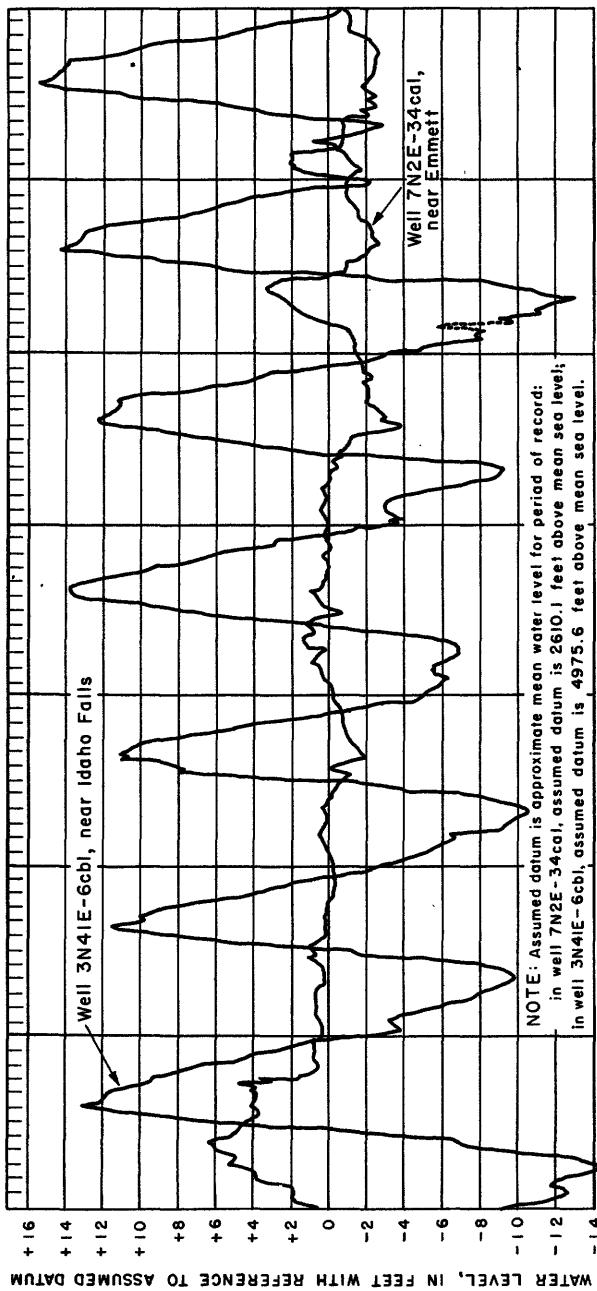

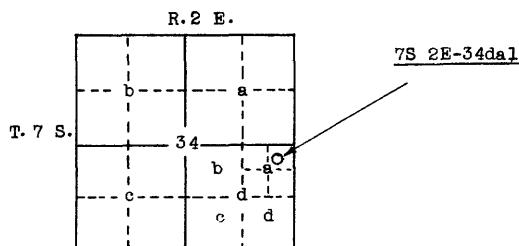

Figure 2.--Graphs showing comparison of weekly water-level fluctuations in two wells in Idaho and monthly precipitation at nearby Weather Bureau stations.

levels observed were substantially above average at the end of the year; during the year water levels in several wells rose to new record high levels. In the northern part of the Rathdrum Prairie, water levels appear to reach their highest yearly levels in June and July. Wells in the southwestern part tend to reach their highest yearly levels in September and October. Wells near Pend Oreille lake attain their highest levels in May and June, when the stage of the lake is at its maximum.

At the end of the year in Malad Valley in Oneida County water levels in 17 wells were above the 1948 year-end levels in amounts ranging from 0.2 foot to 3.5 feet. Year-end departures of water levels from average ranged between -4.0 feet to +3.6 feet. Precipitation was slightly above normal, and substantially more than in 1948. Differences in the net changes of water levels and in departures from average are partly a result of local pumping and discharge by flowing wells. The general net rise in levels, however, indicates that the recharge exceeded the draft on the supply during the year, which is counter to the theory that ground water in the area is overdeveloped.

WELL-NUMBERING SYSTEM

Idaho well numbers indicate the location of wells within the official rectangular subdivisions of the public lands, with reference to the Boise base line and meridian. The first two segments of a number designate the township and range. The third segment gives the section number, followed by two letters and a numeral, which indicate the quarter-section, 40-acre tract, and serial number of the well within the tract. Quarter-sections are lettered a, b, c, and d in counterclockwise order, from the northeast quarter of each section, as in the diagram below. Within quarter-sections the 40-acre tracts are lettered in the same manner. Well 7S 2E-34dal is the first well recorded in the NE $\frac{1}{4}$ SE $\frac{1}{4}$ sec. 34, T. 7 S., R. 2 E.

Water-level fluctuations during 1949 in 39 observation wells are listed in the following table. The departure from average is estimated on the basis of non-weighted average of all recorded measurements.

Comparison of net changes in water levels in 39 observation wells in Idaho with precipitation, 1949

County and well no.	Water levels		Precipitation in inches at nearest U. S. Weather Bureau Station

WELL DESCRIPTIONS AND WATER-LEVEL MEASUREMENTS

Ada County

4N 1W-36dal. Richard Foster. Drilled and dug domestic well, diameter 3 inches, depth 184 feet. Water level influenced by local irrigation. Records available: 1915-17, 1925, 1927-49. Mar. 1, 4.5; May 24, 3.3; July 18, 1.1; Sept. 23, 0.4.

3N 1W-1ccl. Jerald Dunten. Drilled stock and domestic well. Water level influenced by local irrigation. Records available: 1913-16, 1925, 1934-35, 1938-49. Mar. 4, 10.4; May 24, 6.4; July 18, 6.7; Sept. 23, 6.2; Oct. 28, 7.8.

3N 1W-10ccl. Arthur Keck. Dug domestic water-table well in shallow Quaternary sediments. Water level influenced by local irrigation. Records available: 1912-17, 1924-25, 1927-49. Mar. 4, 4.6; May 24, 2.0; July 18, 1.4; Sept. 22, 1.5; Oct. 27, 3.1.

3N 1E-4bal. Ellen F. Beebe. Dug domestic water-table well in Quaternary sand and gravel, diameter 36 inches, depth 50 feet. Water level influenced by irrigation. Records available: 1926-29, 1933-49. Mar 8, 18.5; Oct. 30, 10.7.

3N 1E-5a1. J. E. Wingate. Dug domestic water-table well in Quaternary sand and gravel, diameter 36 inches, depth 60 feet. Water level influenced by local irrigation. Records available: 1933-49.

Canyon County

3N 3W-25aa1. Charles Imberg. Drilled unused well, diameter 6 inches, depth 145 feet. Records available: 1933-49. Mar. 1, 12.0; May 24, 8.8; July 18, 8.0; Sept. 23, 6.9.

3N 2W-23dcl. Mrs. A. J. Richards and others. Drilled stock and domestic well, diameter 6 inches, depth about 133 feet. Water level influenced by local irrigation. Records available: 1921, 1925, 1928-49. Mar. 2, 21.4; May 24, 20.9; Sept. 23, 17.7; Oct. 26, 18.7.

3N 2W-25aa1. John Hubbard. Drilled domestic and stock well, diameter 6 inches, depth 34 feet. Water level influenced by local irrigation. Records available: 1921, 1924-25, 1928, 1933-49. Mar. 2, 14.0; May 24, 11.2; July 18, 11.5; Sept. 23, 9.2; Oct. 26, 10.3.

Cassia County

10S 23E-20dcl. City of Burley well 1. Dug and drilled unused well, diameter 72 inches, depth 42 feet. Water in Quaternary alluvial sand and gravel. Water level influenced by local irrigation and pumping of nearby wells. Records available: 1947-49. Jan. 4, 13.6; Feb. 1, 14.4; Mar. 1, 14.6; Apr. 1, 15.9; May 3, 16.8; June 1, 13.9; July 2, 17.0; Aug. 1, 16.0; Sept. 1, 13.7; Oct. 1, 13.8.

10S 23E-20dc3. City of Burley well 5. Drilled public-supply well, diameter 24 to 15 inches, depth 1,115 feet. Artesian water in gravel and lava of Pleistocene (?) age. Records available: 1947-49. Jan. 4, 191; Feb. 1, 193; Mar. 1, 192; Apr. 1, 193; May 3, 192; June 1, 191; July 2, 199; Aug. 1, 191; Sept. 1, 190; Oct. 1, 191.

10S 25E-10bal. Robert Simplot. Drilled stock well in Snake River basalt, diameter 6 inches, depth 175 feet. Water level influenced by regional recharge. Records available: 1928, 1948-49.

11S 26E-14abl. G. S. Matthews. Drilled stock well in Quaternary sand and gravel, diameter 4 inches, depth 157 feet. Water level influenced by local precipitation and recharge. Records available: 1948-49. Feb. 15, 110.1; Feb. 25, 110.7; Apr. 8, 109.7; May 19, 110.1; June 9, 106.4; Aug. 23, 104.4; Sept. 17, 104.8; Sept. 28, 107.0; Nov. 7, 109.0.

11S 26E-26ccl. Robert Simplot. Dug unused well in Quaternary sand and gravel, diameter 36 inches, depth 33 feet. Water level influenced by local precipitation and recharge. Records available: 1928, 1948-49. Feb. 24, 31.8; May 19, 31.8; June 9, 30.8; Aug. 24, 31.1; Sept. 17, 31.2; Sept. 28, 31.1; Nov. 7, 28.3.

13S 22E-9dcl. Owner unknown. Dug unused well, diameter 52 inches, depth 112.5 feet. Water in sand and gravel. Water level influenced by regional recharge. Records available: 1948-49. Feb. 24, 77.1; Apr. 9, 80.1; June 10, 81.3; Aug. 23, 72.8; Sept. 17, 69.5; Sept. 29, 69.0; Nov. 7, 69.1.

13S 26E-24aal. John C. Hitt. Dug irrigation well in Quaternary alluvial gravel, diameter 36 to 8 inches, depth 24 feet. Water level influenced by local irrigation and precipitation. Records available: 1941-49. May 19, 2.1; Sept. 17, 6.2; Sept. 28, 6.4; Nov. 7, 8.6.

13S 27E-30bd1. A. D. Pierce (previously published as J. D. Pierce). Dug irrigation well, diameter 72 inches, depth 27 feet. Water in Quaternary alluvial cobble gravel. Water level influenced by local irrigation and stage of Raft River. Records available: 1947-49. Feb. 25, 16.7, pumping; May 19, 4.4; June 8, 3.5; Sept. 28, 6.3; Nov. 7, 6.0.

15S 24E-26bcl. Owner unknown. Dug unused well in Quaternary hillwash and gravel, diameter 48 inches, depth 41 feet. Water level influenced by local precipitation and recharge. Records available: 1948-49. May 19, 33.9; June 8, 35.6; Aug. 23, 35.1; Sept. 17, 36.7; Sept. 28, 36.4; Nov. 7, dry at 36 feet.

15S 25E-6abl. Jenny Wake. Dug domestic well in Quaternary hillwash and gravel, diameter 6 inches, depth 34 feet. Water level influenced by local precipitation and recharge. Records available: 1948-49. Feb. 25, 31.0; May 19, 24.1; Aug. 23, 23.2; Sept. 17, 24.6; Sept. 28, 26.5; Nov. 7, 28.4.

16S 27E-26abl. Mr. Cook. Dug unused domestic well in Quaternary hillwash, diameter 60-24 inches. Water level influenced by local precipitation. Records available: 1936, 1938-49. Feb. 25, 31.8; June 8, 26.7; Aug. 23, 12.3; Sept. 17, 13.7; Sept. 28, 14.9; Nov. 7, 19.0.

Elmore County

1N 4E-23aal. James O. Beck. Drilled test well in Quaternary alluvial sands, diameter 18 inches, depth 64 feet. Water level influenced by local precipitation. Records available: 1947-49. Mar. 28, 27.5; Sept. 30, 44.7, pumping.

Gem County

7N 2W-35abl. R. J. Howard. Dug domestic well, diameter 36 inches, depth 99 feet. Water level influenced by local irrigation. Records available: 1941-42, 1948-49.

IDAHO, KOOTENAI COUNTY

MONTANA

By Frank A. Swenson

PROGRAM OF WORK

Periodic measurements of water levels in observation wells in Montana were continued in 1949 in connection with ground-water studies being made as part of the Missouri Basin program. Observation wells were established in Hill and Chouteau Counties in 1945 and 1946 in connection with the proposed Lower Marias irrigation project. The U. S. Bureau of Reclamation made measurements in 15 of these wells in 1949 and also in the wells established in 1946 and 1947 in connection with the proposed Missouri-Souris project in Roosevelt, Valley, and Sheridan Counties. In 1948 wells were established in Helena Valley and in the Yellowstone River Valley. In 1949 observation wells were established in Richland and Dawson Counties. New observation wells were established in Broadwater County in connection with a geologic and ground-water study being made in the Crow Creek-Townsend Valley area..

The program in the valley and delta area between Kalispell and Flathead Lake, in Flathead County, has been carried on by the U. S. Bureau of Reclamation in cooperation with the Geological Survey. Acknowledgment is made to C. S. Hazen of the Project Planning Office of the Bureau of Reclamation at Kalispell for furnishing the measurements made in 35 wells in Flathead County.

FLUCTUATIONS OF WATER LEVELS

For the purpose of discussion of changes in water levels in observation wells, the State has been subdivided into nine areas as shown in figure 2.

The part west of the Continental Divide is mountainous with fertile irrigated valley lands. It generally has milder winters, cooler summers, and more frequent, abundant, and evenly distributed precipitation than other parts of the State. Total precipitation ranges from about 45 inches in the higher mountain areas to about 12 inches in the valleys which lie in

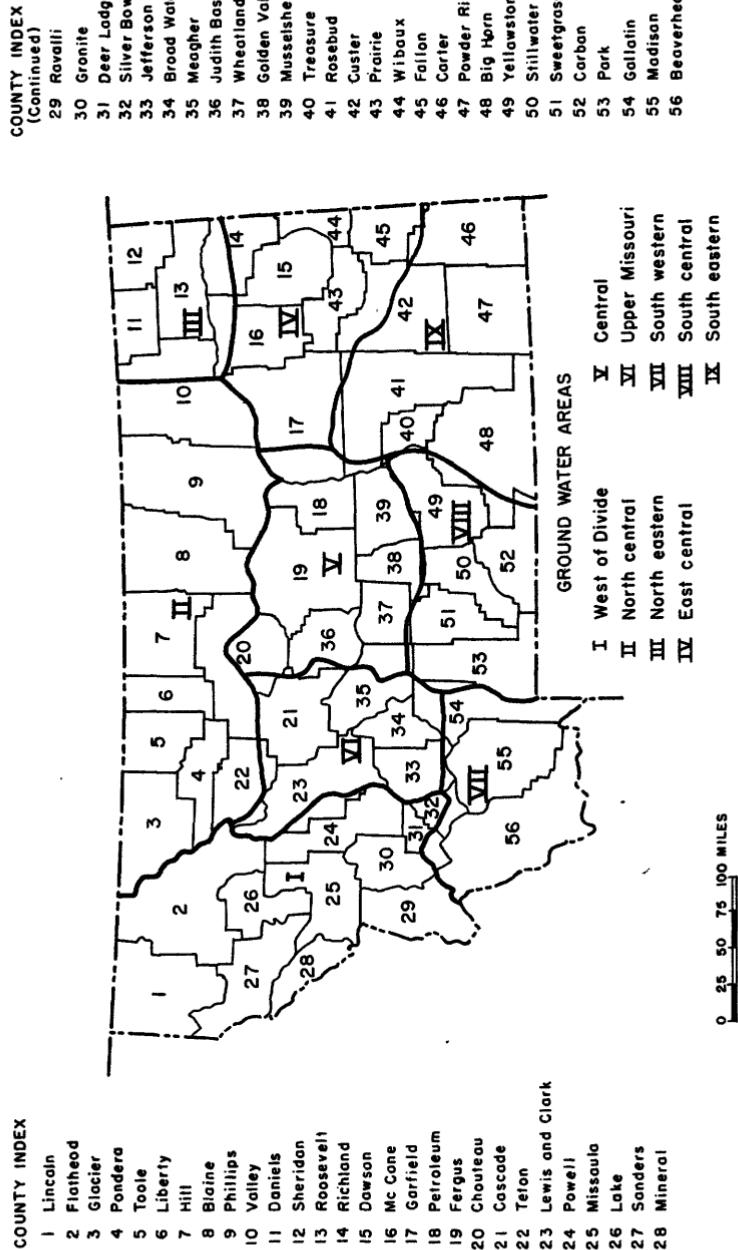

Figure 3.—Map of Montana showing the nine areas into which the State has been subdivided.

the "rain-shadow" of mountain ranges. Water levels in this area were much lower than the peaks reached in 1948 as the result of heavier than normal precipitation. The lowest levels approximated those of previous years.

North-central Montana, north of the Missouri River between Fort Peck and the Rocky Mountains and including the drainage basin of the Teton River, is an area of great plains with high mountains in the western part and with several small mountain ranges. This area has a characteristic continental-type climate with great ranges in temperature and scanty precipitation. Average annual precipitation is 12 to 14 inches. In general, water levels were lower than at any time during the period of record. These low levels were the result of less than normal precipitation during the year with consequent decrease in recharge. No large amounts of ground water are pumped, except locally for municipal supplies, and therefore these low levels do not indicate overdevelopment of ground-water reservoirs.

Northeastern Montana, north of the Missouri River and east of Fort Peck, is a rolling upland plain chiefly devoted to grazing and dry-land wheat raising. This section has a continental-type climate with an average rainfall of 12 to 14 inches. During 1949 the water levels in observation wells were about the same or somewhat lower than those of the past 3 years.

East-central Montana, south of the Missouri River east of the Musselshell drainage, and north of a line through Miles City, is a hilly section mainly used for grazing except for irrigated and cultivated lands along the main stream valleys. Annual precipitation ranges from about 13 to 15 inches. No regular trends of water-level changes can be noted in observation wells. Most of the wells are in irrigated areas and therefore are subject to fluctuations caused by recharge supplied by application of irrigation water. Some wells in or near irrigated areas show a gradual rise in water levels during the past few years.

Central Montana, south of the Missouri River and including the entire drainage basin of the Musselshell River, is a rolling to mountainous grazing area but has considerable cultivated acreage. Annual precipitation ranges from about 12 to 18 inches, the heavier precipitation generally falling at the higher altitudes.

The Upper Missouri section, including all drainage of the Missouri River between Fort Benton and Three Forks, with considerable dry-land and

irrigation farming on the valley bottoms and the more nearly level land. Average annual precipitation ranges from about 12 to 20 inches, the heavier precipitation falling mainly on higher mountain lands. Wells in this area are either on irrigated land where water levels are closely related to irrigation or records are too short to determine any marked trends.

Southwestern Montana, including all of the drainage basins of the Jefferson, Madison and Gallatin Rivers, which converge at Three Forks to form the Missouri River, is a rough, mountainous, timbered area with irrigated farms on the valley lands. The average annual precipitation ranges from about 10 to 20 inches, the heavier precipitation generally occurring at the higher altitudes. Three wells in irrigated lands showed somewhat higher levels in 1949 than in 1948.

South-central Montana, including all of the Yellowstone River drainage basin above the mouth of the Bighorn River, consists of rugged mountainous country and fertile irrigated lands along all major streams. Average annual precipitation ranges from 10 to 20 inches, the greater precipitation generally occurring at the higher altitudes.

Water levels were higher during the summer of 1949 than during previous years. There appears to be a definite rising trend in the well in Park City, Stillwater County. Water levels have been higher each successive year, not only when they reach the peak in the fall but also in the late spring when the water levels are the lowest for the year.

Southeastern Montana, including the drainage basin of the Bighorn River, is a grazing area. Lands along the principal stream valleys are irrigated but some dry-land crops are raised. The average annual precipitation ranges from 12 to 16 inches. Although the record is short there is a rising trend to the water levels in the wells in Bighorn and Custer Counties. The well in Bighorn County is in the Crow Indian Irrigation Project and the rising trend of water levels in this water-table well indicates imminent water-logging of the land in the immediate vicinity of the well. The well in Custer County was drilled into the Fort Union formation. The rise of water level indicates more water is going into storage in this aquifer than is being withdrawn at present.

WELL-NUMBERING SYSTEM

Each well has been assigned a number based on its location within the Bureau of Land Management surveys of the area. The component parts of a well number are: a capital letter indicating the quadrant of the principal meridian and base line system; a township number; a range number; a section number; and two or more lower-case letters which indicate the location of the well within the section. The quadrants into which the State is divided by the principal meridian and base line are designated A, B, C, and D beginning in the northeast quadrant and continuing in a counterclockwise direction. The lower-case letters designate the quarter section, the quarter-quarter section, the 10-acre tract, and the $2\frac{1}{2}$ -acre tract; they are assigned in the same manner as the capital letters. Most well numbers indicate a location no closer than the quarter-quarter section; the closer locations are indicated only when two or more wells are in the same quarter-quarter section. In certain instances, two or more wells in the same quarter-quarter section are distinguished simply by the addition of a serial number. The well-numbering system is illustrated in figure 4.

The wells in Flathead County, which formerly were identified by serial numbers, have been renumbered according to the coordinate location system but the old number is given in parentheses for correlation purposes.

OREGON

By F. A. Watkins, Jr.

SCOPE OF WATER-LEVEL PROGRAM

The observation-well program in Oregon was continued in 1949 in cooperation with the State Engineer. During the year about 490 measurements were made in 66 wells. A preliminary report on the occurrence of ground water in Baker Valley was completed. Work was continued on a ground-water inventory of the Walla Walla River Basin, in Umatilla County. Field work was completed in the Swan Lake-Yonna Valley area.

PRECIPITATION

The following table gives U. S. Weather Bureau records showing average monthly and seasonal distribution of precipitation, in inches and in percentage of the whole, at two representative stations for 50 years of record, and rainfall in percentage of the average for the water-year ending September 30, 1949. Records at the Portland station are given to represent western Oregon and at the Baker station for eastern Oregon.

Month	Rainfall at Portland		Rainfall at Baker			
	50-year average Inches	Percent	1948-49 Percent	50-year average Inches	Percent	
Oct.	2.80	7.2	6.2	0.74	6.5	2.8
Nov.	6.05	15.5	19.8	1.02	9.0	8.2
Dec.	6.66	17.0	25.7	1.23	10.9	16.0
Jan.	5.80	14.9	2.3	1.19	10.6	1.8
Feb.	4.74	12.1	29.3	1.06	9.4	10.6
Mar.	3.92	10.0	8.5	1.05	9.3	4.5
	29.97	76.7	91.8	6.29	55.8	45.9
Apr.	2.73	7.0	2.3	.98	8.7	7.3
May	1.93	4.9	7.1	1.25	11.1	9.8
June	1.48	3.8	1.1	1.10	9.7	1.2
July	.48	1.2	1.6	.48	4.3	2.8
Aug.	.61	1.6	.4	.46	4.1	2.3
Sept.	1.86	4.8	3.2	.71	6.3	3.8
	9.09	23.3	15.7	4.98	44.2	27.2
The year	39.06	100.0	107.5	11.27	100.0	71.1

The following table shows by provinces the precipitation at 17 representative stations, in inches, and relative wetness, in percentage of the 50-year average, for the water-year ending September 30, 1949. Precipitation

ranged from 55.2 percent of normal at the Harney Branch Experiment Station, Harney County, to 107.9 percent at Fall City, Polk County. Average for the State was 88.6 percent of normal.

Province	Station and county	Precipitation, 1948-49	
		Inches	Percentage of 50-year average (1891-1940)
Northern Coast Ranges	Ashland, Jackson	616.63	84.4
	Astoria, Clatsop	77.87	100.9
	Bandon, Coos	654.01	85.8
	Grants Pass, Josephine	19.50	66.6
	Newport, Lincoln	59.97	88.2
Puget Willamette Trough	Albany, Linn	42.14	104.0
	Eugene, Lane	36.59	97.1
	Fall City, Polk	78.01	107.9
	Portland, Multnomah	41.97	107.5
	Salem, Marion	41.11	107.4
Columbia Plateau	Baker, Baker	8.03	71.1
	Bend, Deschutes	8.97	70.7
	LaGrande, Union	18.42	96.1
	The Dalles, Wasco	13.71	101.5
	Umatilla, Umatilla	5.25	70.1
Basin and Range	Harney Branch Experiment Station, Harney	5.00	55.2
	Klamath Falls, Klamath	12.02	92.2

b Estimated in minor part.

FLUCTUATIONS OF WATER LEVELS

September-end water levels in wells IN/1-34N1, in Multnomah County, and 15/4W-32M1, in Lane County, were 0.99 foot lower in 1949 than in 1948. Other wells in the Willamette Valley are listed under Benton, Linn, Marion, Washington and Yamhill Counties. In the Prineville area of Deschutes River subprovince, measurements of water levels were made in five wells. Well 14/16-32N1 and well 14/15-15Q1 (in Crook County) have comparable records for 1948 and 1949. Well 14/16-32N1, in an area of heavy pumping, showed a decline of 11.40 feet. Well 14/15-15Q1, outside the area of heavy pumping, showed a rise of 17 feet. In two artesian wells in The Dalles area, in Wasco County--1N/13-32G1 and 1N/13-32H1, the March 1949 water level was 10.12 feet below that of March 1948. Well 1N/13-23D1, in the Yakima basalt, was 8 feet lower in March 1949 than in March 1948. Well 2N/12-25 R1, in The Dalles formation, showed a rise of 2.59 feet over the March 1948 level. Water levels in August 1949 in Fort Rock Valley and Chewaucan Valley averaged 0.14 foot lower than in August 1948. The September 1949 levels for the wells in the Walla Walla subprovince averaged 1.02 feet below the September 1948 levels. In well 6N/35-36H1, the highest level of the year occurred in June 1949 and was 0.74 foot below the high of July 1948. On the average,

the water levels in the Harney Basin subprovince for August 1949 were 0.55 foot below those of August 1948. The yearly high (1.70) in well 23/31-33B1 in May was 0.23 foot below the high of June 1948. Water levels in the wells measured in the Grande Ronde subprovince showed virtually the same level in July 1949 as in July 1948, except for the three wells in Union County, which averaged 0.93 foot higher in July 1949 than in July 1948.

WELL-NUMBERING SYSTEM

The field numbers used in this report show the location of wells according to the official rectangular system for subdivision of the public land. The part preceding the hyphen indicates township and range; the one or two digits immediately following the hyphen indicate the section; the letter following indicates the 40-acre subdivision of the section, as shown in the accompanying diagram; and the final digit indicates the serial

D	C	B	A
E	F	G	H
M	L	K	J
N	P	Q	R

number of the well within that 40-acre tract. Locations in Oregon are referred to the Willamette base line and meridian. If no letter appears after the township number, the township lies south of the base line; if no letter appears after the range number, the range lies east of the meridian. Thus, well 3/38-25B1 is in the NW $\frac{1}{4}$ NE $\frac{1}{4}$ sec. 25, T. 3 S., R. 38 E., and is the first well listed in this tract.

WELL DESCRIPTIONS AND WATER-LEVEL MEASUREMENTS

Baker County

Baker Valley

7/39-20N1. City of Baker. Water-table well in alluvium. Records available: 1936, 1938-49. Mar. 8, 2.34; July 2, 3.52; Aug. 18, 5.68; Nov. 11, 6.26.

8/39-22F1. Baker County. Water-table well in alluvium. Records available: 1936, 1938-49. Mar. 8, 2.75; July 2, 4.30; Nov. 11, 4.53.

8/40-19D1. Baker County. Water-table well in alluvium. Records available: 1936, 1938-49. Mar. 8, 1.57; July 2, 4.15; Aug. 19, 6.73; Nov. 11, 6.08.

8/40-23A1. Baker County. Driven water-table well in alluvium. Diameter 1 $\frac{1}{2}$ inches, depth 7.50 feet. Installed to replace dug well. Land surface datum is 3,347.28 feet above sea level. Records available: 1936, 1938-47, 1949. Nov. 11. 4.03.

Benton County

Willamette Valley

14/SW-10R1. Chris Lindseth. Water in alluvium. Records available:
1938-49. Apr. 5, 10.60; June 16, 12.47; Nov. 26, 14.75.

Crook County

14/15-15Q1. M. D. Colahan. Flowing artesian well. Pressure-gage readings by owner. Records available: 1945-49.

UTAH

By Philip F. Fix, W. B. Nelson, and R. G. Butler

PROGRAM OF WORK

The observation-well program in Utah, begun in 1935, was continued in 1949 in cooperation with the State Engineer. The State-wide inventory now includes records of measurements in 42 ground-water areas. In each of these areas the selected observation wells are measured periodically with a steel tape or, in the case of a flowing well, with a mercury manometer gage. In many of the areas one or more wells are equipped with recording gages. During 1949 a total of 2,201 measurements was made in 657 wells, and 31 recording gages were maintained. Measurements of water levels were made cooperatively by the Salt Lake City Corporation in observation wells in Salt Lake County and by the Bureau of Reclamation in Wasatch County.

During the year detailed investigations were carried on in Escalante, Ashley, Sanpete, Juab, and Utah Lake Valleys, and the Weber Delta of the East Shore area.

FLUCTUATIONS OF WATER LEVELS

The net rise or decline in the water levels of a given area is the mathematical average of the changes observed in water levels of the observation wells selected to represent that particular area. This may differ considerably from changes in the water levels of individual wells in that area. Ground-water levels in Utah at the end of 1949 were generally above the average for the period of record and higher than at the end of 1948.

Ground-water levels rose in most of the basins of the Southwestern Bolson province but declined in some basins, and showed virtually no change in the Milford pumping district of Beaver County. The greatest rise was 5.1 feet in the Coal Creek district of Cedar City Valley, in Iron County, and the greatest decline was 3.1 feet in the Flowell district of Millard County. Water levels in the central part of the Beryl pumping district, in Iron County, continued to decline, but rose in the outer part of the district.

Ground-water levels in the basins of the Montana-Arizona plateau and the Northern Rocky Mountains province generally were higher than at the end of 1948, although the levels declined in a few places. The water levels rose more than 12 feet in two observation wells on the high land at the head of the East Fork of the Sevier River. The changes in other areas ranged from a rise of 0.7 foot in the Uinta Basin, to a decline of 0.3 foot in the Bear Lake Valley, in Rich County.

Demand for underground water increased throughout the State in 1949, particularly in the Milford, Beryl, Parowan, Cedar City, and Grouse Creek areas. The Beryl area remained closed by the State Engineer to new applications for drilling of wells for irrigation.

WELL-NUMBERING SYSTEM

The well number indicates the location of the well with reference to land subdivision, according to a system adopted by the State Engineer, and described in his 20th Biennial Report (1936), page 87. The State is divided into four quadrants by the Salt Lake base and meridian, and, according to the well-numbering system, these quadrants are designated by capital letters, thus: A for the northeast quadrant, representing townships north, ranges east; B for the northwest quadrant; C, southwest; and D, southeast. In the well number, the designation of the township is enclosed in parentheses, and includes one of these letters, a figure showing township, and a figure showing range. Thus, in the number of the first well of the tabulation, (C-26-10) 32cad1, the portion within parentheses indicates that the well is in T. 26 S., R. 10 W. The number following the parentheses designates the section, and the lower-case letters following the section numbers give the location of the well within the section, the first letter indicating the quarter section (the letters a,b,c,d, representing respectively the northeast, northwest, southwest, and southeast quarters, as before), and succeeding letters showing location within the quarter-section down to a 10-acre tract. Thus, number (C-26-10)32cad1 represents well number 1 in the SE₄NE₄SW₄ sec. 32, T. 26 S., R. 10 W. In the area surveyed from the Uinta special base and meridian (in Duschesne and Uintah Counties) the well numbers are derived in the same fashion, and are preceded by the letter "U."

The State claim or application number given is that used in the State Engineer's records; claim numbers refer to wells that were in existence when the State ground-water law went into effect in March 1935, and the application numbers refer to wells of subsequent origin.

WASHINGTON

By F. A. Watkins, Jr.

SCOPE OF WATER-LEVEL PROGRAM

The program of measurements of water levels in observation wells in Washington, and also in wells observed in connection with the several projects involved in a general inventory of the water resources of the State, was continued in cooperation with the State Department of Conservation and Development and, in the Columbia Basin area, with the United States Bureau of Reclamation. Field work was begun in Clark, Grant, and Kitsap Counties and a preliminary investigation of ground-water resources was made in Skagit County. Work was continued in Walla Walla County and a ground-water report on western Whatcom County was completed.

About 1,080 measurements were made in 104 wells. One recording gage and 13 nonrecording gages were maintained throughout the year.

FLUCTUATIONS OF WATER LEVELS

The first of the two following tables shows seasonal distribution of precipitation at two representative stations in the State for 50 years of record, by average for each month in inches and the ratio of the average monthly to the average annual, in percent; also the ratio of monthly rainfall in 1948-49 to the average annual rainfall. Records at the Olympia station are given to represent western Washington and the Waterville station for eastern Washington. The second table shows precipitation in inches for the water year ending September 30, 1949, at 13 representative stations in the State; and also the ratio of the 1948-49 rainfall to a 50-year average (1891-1940) for each of these stations, in percent. Precipitation ranged from 74.3 percent of normal at Walla Walla to 106.3 percent at Port Angeles. The above information was obtained from records of the U. S. Weather Bureau.

TABLE I

Month	Rainfall at Olympia			Rainfall at Waterville		
	Inches	50-year average	1948-49	Inches	50-year average	1948-49
Oct.	4.32	8.2	7.8	0.73	6.6	5.6
Nov.	8.47	16.1	17.8	1.43	12.9	13.4

Sept.	2.35	4.5	2.8	.58	5.3	6.8
	10.96	20.8	14.1	3.73	33.7	11.7
The year	52.62	100.0	96.4	11.05	100.0	83.3

TABLE II

Province	Station	County	Precipi- tation (inches)	Percent of 50-year average (1891-1940)
Northern Coast Ranges	Port Angeles Aberdeen	Clallam Grays Harbor	26.88 70.38	106.3 84.1
Fuget-Willamette Trough	Olga Seattle Vancouver Olympia	San Juan King Clark Thurston	27.08 29.22 35.22 50.77	91.8 89.4 96.1 96.4
Columbia Plateau	Ellensburg Waterville Kennewick Walla Walla	Kittitas Douglas Benton Walla Walla	7.58 9.21 5.48 11.97	84.6 83.5 79.1 74.3
Northern Rocky Mountains	Lakeside Colville Spokane	Chelan Stevens Spokane	8.63 15.24 14.78	81.1 89.7 97.4

For the purpose of this report the four ground-water provinces listed in Table II are divided into subprovinces according to climate, topography, and the occurrence of ground water. In the Puget Sound subprovince, in the northwestern part of the State, ground-water levels in the Tacoma area were slightly higher in September 1949 than in September 1948. The Tacoma area consists of plains of glacial origin. Its productive bodies of ground water occur in tongues of sand and gravel in the alluvium of the valleys and in the glacial drift on the interstream uplands. Ground-water levels in Snohomish County were also lower in September 1949 than in September 1948. Wells in sub-till sands and gravel were, on the average, 0.28 foot lower. Well 31/5-10J3 with confined water in sub-till sand showed a decline of 2.02 feet. Well 30/5-22A1 in outwash sand and gravel was 3.02 feet lower in November 1949 than in September 1948.

Nearly all the Columbia Plateau is underlain by volcanic rocks, largely the Yakima basalt, in which continental sedimentary rocks are intercalated. In these rocks water-bearing zones differ greatly in thickness, permeability, and extent. Large parts of the plains are veneered by fluvioglacial gravel, which commonly is very permeable but in which the saturated zone in general is thin but in places is thick enough to yield several hundred or even a few thousand gallons of water a minute. The wells in the Columbia Basin are listed under Adams, Franklin, and Grant Counties. Water levels in three wells, nos. 9/29-25D1, 19/26-34D1, and 19/28-22G1, in sand and gravel showed an average decline of 0.73 foot, and water levels in four wells, nos. 19/31-19B1, 20/26-18R1, 21/28-34A1, and 22/27-30P1, in the deeper basalt, showed an average rise of 0.37 foot over year-end levels of 1948.

In the Palouse subprovince in the southeastern part of the State, measurements were made in seven wells in Whitman County. Water levels in two shallow water-table wells, nos. 14/45-11N2 and 15/46-20K1, in December 1949 showed a rise of 0.09 foot over October 1948. In the one artesian well, no. 14/45-5B1, in Pullman for which comparable records are available, the December 1949 level is 2.25 feet below the October 1948 measurement, while the artesian well, no. 18/45-35P1, at Steptoe showed a decline of 3.60 feet.

In the Spokane Valley in the Northern Rocky Mountains province, the gravel yields large volumes of water to wells that extend below the water table only a few feet. Water levels in five wells in the area of effluent ground water that sustains the low flow of the Spokane River averaged 0.06 foot above the year-end levels of 1948, and in three wells in the upstream area where the river is influent, there was a rise of 0.66 foot.

WELL-NUMBERING SYSTEM

Observation wells are listed by counties and by townships within the county. For example, in the number 20/2-13J1, the figures preceding the hyphen indicate the township and range (T.20 N., R. 2E.). The figures following the hyphen indicate the section (sec. 13), and the letter indicates the 40-acre subdivision of the section. Within each 40-acre tract the wells are numbered serially, as indicated by the final digit of the number. Thus, well 13J1 is the first well to be listed in the NE $\frac{1}{4}$ sec. 13. All townships in Washington are referred to and lie north of the Willamette base line; the ranges refer to the Willamette meridian. The letter W is added after the digit indicating the range in the numbers of wells that lie west of this meridian (8/2W-28D3).

WELL DESCRIPTIONS AND WATER-LEVEL MEASUREMENTS

Adams County

Columbia Basin

16/29-35R1. Kathryn D. Tate. Water in basalt. Records available: 1940-49. Mar. 9, 278.72; June 26, 277.92.

19/31-19B1. Barbara Dormaier. Water in basalt. Records available: 1939-49. Mar. 10, 184.30; June 26, 184.38; Nov. 17, 184.36.

Benton County

Yakima Basin

9/27-19G1. Paul Root. Water in gravel. Records available: 1940-49. Mar. 9, 15.88; June 21, 12.35.

8/29-1D1. Garber Dairy. Water in sand and gravel. Records available: 1948-49. Mar. 9, 67.48; June 21, 63.04; Nov. 16, 63.48.

8/30-9E1. E. Dagge. Water in sand and gravel. Records available: 1948-49. Mar. 9, 23.60; June 21, 20.65; Nov. 16, 20.34.

Chelan County

Wenatchee Basin

23/19-4E2. City of Cashmere natatorium well. Water in sand and gravel in terrace deposit of Wenatchee River. Records available: 1945-49.

WYOMING

By R. T. Littleton

PROGRAM OF WORK

The observation-well program in Wyoming was continued in 1949 in cooperation with the State Engineer and the city of Cheyenne and also as a part of the Missouri Basin program. Measurements of water levels were made in 107 wells. Field work was completed in ground-water investigations in the Gillette area, Laramie Basin, Glendo area, and the Horse-Bear Creek area. Ground-water studies of Goshen County and the Riverton irrigation project were continued.

At the beginning of 1949, 116 wells were being measured, mainly in the Cheyenne and Egbert-Pine Bluffs-Carpenter areas. During 1949 measurements were discontinued in 80 wells and measurements were begun in 71 new wells. The addition of new wells provided more extensive water-level observations in the State. Included were groups of observation wells established as a part of the ground-water studies of the Missouri Basin program.

WELL-NUMBERING SYSTEM

Wells are numbered according to their location within the land subdivisions in the State. With the exception of the Wind River Indian Reservation, Wyoming was surveyed from the sixth principal meridian and base line and lies in the northwest quadrant. The Wind River Indian Reservation lies in Fremont and Hot Springs Counties and was surveyed from the Wind River meridian and base line. The numbers of wells within the Wind River Indian Reservation are preceded by a capital letter which designates the quadrant. The first segment of a well number indicates the township, the second the range, and the third the section. The letters following indicate the location of the well within the section. The first letter denotes the quarter section, the second the quarter-quarter section, and the third the quarter-quarter-quarter section or 10 acre-tract. The letters are assigned in a counterclockwise direction beginning in the northeast quarter of the section.

WELL DESCRIPTIONS AND WATER-LEVEL MEASUREMENTS

Albany County

Laramie Basin

14-74-6dac. Monolith Portland Midwest Co. Drilled unused well in alluvium, diameter 4 inches, depth 54.5 feet. Records available: 1948-49.
